

Protect your Assets

The spyware epidemic that afflicts 90% of consumer PCs presents real-world threats to corporate resources.

- Compromised security of corporate information
- Diminished workstation performance, resulting in reduced employee productivity
- Increased service burden on already-overworked IT staff
- Unnecessary network overhead

Antivirus software does not address the full barrage of spyware attacking companies today. As a result, corporations of all sizes representing virtually every industry have sought out Webroot to confront their spyware problems.

What is Spy Sweeper Enterprise?

Spy Sweeper Enterprise provides centralized, comprehensive spyware protection that pro actively detects and removes adware, Trojans, system monitors, keyloggers and more. The enterprise-scalable solution is administered and managed through a main console without end-user intervention. End users only see a small antispysware icon on the start bar, and the scheduled sweeps for spyware.

Spy Sweeper Enterprise is based on the award-winning consumer Spy Sweeper product, which was recently named PC Magazine's Editors' Choice in the antispysware category. Spy Sweeper is the #1 selling spyware software nationally, and is sold in thousands of locations across the U.S. and Europe.

Spy Sweeper Enterprise Protects the Corporation

Spy Sweeper Enterprise pro actively protects, detects, quarantines and deletes spyware network-wide, thereby reducing security risks and support requests, and reestablishing computing performance.

Spy Sweeper Enterprise provides

- Centralized management console for automated deployment
- Reporting and updates for simple and efficient administration
- Easily updateable spyware definition files
- Scheduling options for routine or manual network spyware sweeps
- Ability to create and enforce customized protection policies
- Detailed reports on malicious threats, including determining root cause
- Best-in-breed detection, quarantine and elimination of spyware within the enterprise

Spyware Statistics

More than 20 million computer users are affected by spyware.
~ Gartner G2

1/3 of all European companies are infected with spyware.
~ EIT Survey 2003

Spyware steals resources by:

- Reducing system performance and stability
- Reducing worker productivity
- Creating software conflicts with legitimate programs
- Increasing support needs
- Stealing network resources
- Increasing network overhead
- Decreasing network performance

Spy Sweeper Enterprise™

Key Features

Customer Support

Spy Sweeper Enterprise is backed by expert technicians to support any spyware issues. E-mail and phone support is provided during normal business hours.

Enterprise-scalable Deployment

A sophisticated administration console helps you define configurations and automate deployment to your client base.

Updated Protection

To date, 20,000 traces of spyware have been detected, and more are discovered every day. Updates of Webroot Anti-Spyware's constantly evolving spyware definitions base is regularly provided to subscribers to ensure up-to-date protection.

Security Status Reporting

A series of pre-defined reports ranging from executive summaries, spy reports, alert reports, license reports, and more are available.

Global Administration

The centralized administration console enables administrators to pro actively manage security threats. Inclusive in the console are workstation deployment and configuration, update management, licensing management, notifications and reporting.

Protection from Spyware

- Spy Sweeper Enterprise scans the entire network using a database of thousands of known spyware threats.
- Administrators can manage updates of new spyware definitions to ensure ongoing protection from new threats, which emerge daily.
- During a scheduled sweep, Spy Sweeper Enterprise immediately quarantines or deletes any spyware programs or traces identified that match the threat database.
- Because some spyware programs or files are essential to the operation of certain desirable applications (e.g. file-sharing programs), administrators can set a pre-determined removal policy to restore or permanently delete suspect files in a safe environment.
- Spy Sweeper Enterprise offers proactive protection against spyware with active shields for the start-up menu, system memory, security settings, home page and more.
- The lock down feature allows administrators to set the network and workstation settings to ensure that all workstations comply with the corporate security policy.

On the record . . .

"Spyware removal tools are as important as firewall and anti-virus packages these days."

*~ Konstantinos Karagiannis
PC Magazine*

"If you have spyware on your machine, you're almost certainly getting more advertising than someone who doesn't."

~ ZD Net

"Without a marvelous program from Webroot, called Spy Sweeper, this privacy invasion could have gone on indefinitely."

*~ Dan Dubno
CBSNEWS.com*

"I recommend three programs: Spy Sweeper from Webroot Software, the established leader...."

*~ Stephen H. Wildstrom
BusinessWeek*
